

ReForm XT[™] Web-Based Mobile Form Builder

ReForm XT is a web-based Mobile Form Builder that provides non-technical users the ability to build custom mobile form applications to fit specific information gathering needs. Simply use the web-based form builder to design your mobile forms and send them to your mobile device. Once gathered and uploaded, your vital business information is immediately available online. The information below provides a more in-depth view on ReForm XT and its specific components.

ReForm XT Online

Web-based Form Design (LogicLine[™])

Preview Window - This window demonstrates how the form and its questions will appear on the client device. As you make changes, it updates to show you how those changes will look on the client.

- **Skinning** - Skinning tools give you the power to change the look of the form by changing background and text colors and adding header images.
- **Subforms** - You can organize questions within a form into groups called subform blocks. Users can choose which block of questions they want to answer in whatever order they choose.
- **Question Types**
 - **Numeric**: Answered with an integer, decimal or currency value. You can specify a range of acceptable answers by setting minimum and maximum values. Numbers can be typed into a textbox, and integers can be selected from a slider or spinner.
 - **Text**: Answered with text typed into a textbox. You can specify whether that textbox will allow a single line or multiple lines of answer space. You can also set a maximum character limit.
 - **Multiple Answer**: Answered by selecting from one or more available answer options. You can create, edit and order as many answer options as you'd like. Users can make single selections by clicking radio buttons, selecting from a drop-down list, or by typing in their own "other" answer. You can specify the minimum and maximum number of required answers for a multiple selection question, which users will then answer by clicking checkboxes next to the answers they choose.
 - **Date-Time**: Answered by typing a date, time or combination of both. The date may also be selected from a pop-up calendar. The stopwatch tool can be used to capture elapsed time in hours, minutes and seconds.
 - **Ranking**: Answered by assigning a rating to various items. Ranking questions are answered by selecting an option from a list. For each option in the list, values are associated with the option. Unique ranking questions dictate that once a value for an option has been selected, that value is no longer available.. Non-unique ranking questions give the ability to select the value more than once; this is especially value when creating survey forms.
 - **Signature**: Answered by signing on the screen with the stylus. This type of question is not available for devices that do not have touch-screen capabilities.
 - **Image**: Display an image of your choosing.
 - **Message**: Displays a message of your choosing.
 - **Device ID**: Displays the unique id of your device.

- **Question Types Cont:**
 - Address: Provides text fields for users to enter their name / company, address, city, state and zip code.
 - Contact: Provides text fields for users to enter their name, company, email address, phone numbers, and fax number in the provided space.
 - Barcode: Answered by entering one or many barcodes. Users may type the code or scan it in via a device integrated scanner or a scanning device attached to the handheld.
 - Note: Not all question types are available on all devices. LogicLine will only show available types based upon the device selected.
- **Logic** - ReForm XT introduces the ability to include conditional follow-ups to questions. A follow-up block may contain one to many different questions to be asked in response to how a user answers a particular question.
- **Interactive Interface** - Users may right-click on questions and other form elements to bring up pop-up menus allowing them to edit, delete or add follow-ups or questions. Questions and other form elements may be re-arranged by dragging and dropping them in a different order within the form or into and out of subform or follow-up blocks. Users can also use on-screen menus to edit the forms, or they can collapse these menus to offer more workspace.
- **Internet Explorer** - IE browser versions 6 and 7 are the officially supported versions for using ReForm XT Online.

Form Administration

- **User Types**
 - Basic Users: These users can log in to the client and website to download and submit forms assigned to them, view results from forms they have submitted, and edit their own personal information.
 - Form Managers: These users have all the privileges of a basic user, plus the ability to create and manage forms.
 - Account Managers: These users have all the privileges of a form manager, plus the ability to create and manage users and groups.
- **Groups** - Users can be organized into groups, which can then be assigned to specific forms. Users can be assigned to more than one group.
- **Data Reports** - Results retrieval tools allow you to search for results submitted by particular users or for particular forms. You can filter results reports by a date range. You can also choose to view the lists of questions and answers as a printable webpage or as a spreadsheet.

ReForm XT Mobile Clients

Device Types

- **Windows Mobile**
 - **Pocket PC/Professional/Classic** - This device uses the Windows Mobile Pocket PC client and can sync with your computer via Active Sync or any internet connection. While utilizing the ReForm XT application, you can navigate by tapping the screen with the stylus, by using the keypad, or by using a combination of the two. Use the soft keys to access menus, the 5-way navigation buttons to move through menu and answer options and the fire button to select a choice.
 - **Smartphone/Standard** - This device uses the Windows Mobile Smartphone client and can sync with your computer via Active Sync. While utilizing the ReForm XT application, you can navigate by using the keypad. Use the soft keys to access menus, the 5-way navigation buttons to move through menu and answer options and the fire button to select a choice.
- **Palm OS** - This device uses the Palm OS client and can sync with your computer via any internet connection. While utilizing the ReForm XT application, you can navigate by tapping the screen with the stylus, by using the keypad, or by using a combination of the two. Use the 5-way navigation buttons to move through menu and answer options and the fire button to select a choice.
- **BlackBerry** - This device uses the BlackBerry client and can sync with your computer via any internet connection. While utilizing the application, you can navigate by using the menu button and trackwheel or trackball to scroll through options and make selections.
- **iPhone** - This device uses the native Apple iPhone client and can sync with your computer via any internet connection. While utilizing the application, you can navigate by using the touchscreen.

Carriers and Transmission Requirements

- ReForm XT works with every major carrier, including Sprint, Verizon and AT&T wireless regardless of network type.
- A network data plan is required to wirelessly submit completed forms to ReForm XT Online.
- When using cradle-sync to upload submitted forms to the Anyware Datacenter, an internet connection on the computer is required.

OTA Installation

- You can install ReForm XT over the air through any wireless internet connection. Point your device's browser to <http://reformxt.com/ota>
- There are downloadable installers and updates available for Windows Mobile, Palm, and RIM (BlackBerry) devices. The iPhone client is available on the iTunes App Store.

Disconnected State

- When you log on to ReForm XT with your device's internet connection, users and forms are automatically downloaded and stored to the device. You can then access them when you have no available connection to the internet.
- Answers to forms completed in a disconnected state are stored securely on the device until an internet connection has been established and the device can sync with ReForm XT's database.

Additional Information

- You can find additional information on ReForm XT by visiting the Anyware Mobile Solutions website at <http://www.goanyware.com/>.
- The ReForm XT End User License Agreement can be found online at <https://www.reformxt.com/>.
- If you have specific questions about ReForm XT, whether technical or functional in nature, you can contact directly from the information below.
